I posted this in the Avsim Panels forum without any replies,so hoping I have better luck here.

I have been using Etienne's pushback gauge version 1.3.9 in Vista x64 without any problems but recently upgraded to Win 7 Pro x64 and now it won't load. It says can't load ATN.GAU when I try to load an aircraft with this gauge installed. I have tried emailing Etienne directly but hve recieved no reply

Anyone successfully using this gauge with Windows 7 ?

I don't have it. where did you get it?

Are the installed files in the correct location? Where is the ATN.GAU file located?

Read through this post [http://forums.simfli...pic.php?t=51859](http://forums.simflight.com/pic.php?t=51859) (<http://forums.simflight.com/viewtopic.php?t=51859>) it might be your version of FSUIPC.

Or re-install with UAC off.

I got it from the Avsim Library, just type Etienne Martin in the search box. Its a brilliant pushback gauge, it does the usual pushback and taxi and you can control the pushback with the rudder pedals, so no more guessing how many feet to start the turn, also has a tow function if the engines are not running, great for moving aircraft to another stand. It also controls external lights so handy to turn on Strobes when entering the runway, shows aircraft weight - just a useful bit of kit, which is why I'm peeved it doesn't work in Win 7 x64.

You put the files ATN.GAU and ATN.INI in the FSX Gauge folder, and ensure you have msver71.dll in the windows\system32 folder - which I have, and put the gauge in the aircraft panel.cfg and thats it - NORMALLY. I have UAC off just as I did in Vista x64.

I tried emailing Etienne from the address in his readme file but he did not respond

ATN.GAU is the only gauge file I have found that will not work with Win 7

Try changing the Properties Compatibility setting on the files to Vista or WXP.

Isn't it for FS2004 ?

Hi

I am using ATN.gau ver 1.3.9 in Windows 7 x64 without any problems. I just copied everything over from my Vista x64 installation into Windows 7 and it worked OK.

Hope you find a solution

Regards
Phil

Ulisses

Sorry my mistake, I meant FS2004

Phil

Thanks for the info, that confirms it does work within Win 7 x64 !!

This ATN.GAU still refuses to load. Looking in the readme files it says it requires the C++ runtime library MSVCR71.DLL and Microsofts GDI+ libraries that are incorporated in XP. I have the MSVCR71.DLL in the correct place, does anyone know if Windows 7 Pro has the GDI+ libraries or is this a separate download.

The Thread is quite old, but I just got the problem myself.

The MSVCR71.DLL comes with version 1.3.6 so download that one and copy the dll into the C:\Windows\SysWOW64 instead of C:\Windows\System32. Install the gauge from cersion 1.3.9 as usual, restart the computer, start up FS9 and it should work fine.
